# gas-tec 600

Portable gas powered glue gun

The **gas-tec 600** is a robust compact hotmelt glue gun that runs on butane gas. It does not require mains electricity or batteries but operates using easily refillable LEC™ (Liquid Energy Cells) power technology. The **gas-tec 600** has been built to a very high standard and incorporates a soft-feel handle and full-hand trigger making it a very comfortable gun to use.

- Refill the LEC™ gas cartridge using standard cigarette lighter canisters.
- Refills in just 15 seconds which keeps the **gas-tec 600** running for approximately 1½ hours.
- Easy to start up, simply turn the gas dial and press the piezo ignition button.
- Reaches operating temperature in just 5 minutes with an output of up to 1.5 kg/hr (3.3lbs/hr) depending on the glue formulation.
- Thermostatically controlled to give the optimum temperature to achieve the best glue delivery.
- Designed to use standard 12mm (½") **tecbond** high performance, hotmelt glue sticks.
- The **gas-tec 600** can be used for a huge range of applications from shop fitting, exhibition displays, flooring and carpet laying, ceramic tile displays, low voltage wiring, to dent repairs on cars and many more.
